

# SCALE FOR PROJECT PISCINE SWIFT IOS (/PROJECTS/PISCINE-SWIFT-IOS) / DAY 05 (/PROJECTS/PISCINE-SWIFT-IOS-DAY-05)

## Introduction

For the smooth running of this evaluation we ask you to respect the following :

- Stay courteous, polite, respectful and constructive in all situations during this exchange. The relationship of trust between community 42 is something you depend on.
- Highlight to the person(or group) find eventual dysfunction of getting the work done, and take time to discuss and debate them.
- Accept that there may be differences in interpreting the subject's requests or the scope of the features. Stay open-minded to the vision of the others (is he right or wrong?), and evaluate the most honestly possible. The pedagogy of 42 make sense only if the peer-evaluation is done seriously.

## Guidelines

- You should only evaluate what is on the GiT repository of the student or the group.
- Make sure to check that the GiT repository is the one corresponding to the student or group and the project.
- Meticulously check that no malicious things have been used to mislead you and make you evaluate something other than the official content.

- Any script intended to facilitate the evaluation provided by one of the two parties must be rigorously verified by the other party to avoid some unpleasant surprises.

- If the student/ corrector has not yet done this project, it is mandatory for the student/corrector to read the subject in full before beginning this defense.

- Use the available flags to sign something rendered empty, non-functional, a case of cheating, etc. In this case, the assessment is completed and the final mark is 0 (or -42 in the special case of cheating). However, except in the case of cheating, you are encouraged to continue to discuss the work that has been done (or not done) to identify the problems that have led to this situation and avoid them for the next rendering.

## Exercise 00

---

### Tab Bar

- Are the icons on the "Tab Bar" customized ?
- Can one switch from one tab to another ?

 Yes

 No

---

## Exercise 01

---

### Table View

- Does one of the 2 views contain a table view with at least 3 different locations ?

 Yes

 No

---

## Exercise 02

### MapKit

- Is there a map in the other view ?
- When arriving at the map, is it centered and zoomed into school 42 ?
- When clicking on the pin, is a pop up with a title and a subtitle displayed ?

☒ Yes

☐ No

## Exercise 03

### SegmentControlBar

- Is there a segment control bar present on the map ?
- Are the display choices "Hybrid", "Satellite" and "Standard" present and functional ?

☒ Yes

☐ No

## Exercise 04

### Geolocalisation

We will test the geolocation of the application. Try several different coordinates (Debug -> Location).

Does the map refocus on the chosen location ?

☒ Yes

☐ No

## Exercise 05

### Select a location

- Do all the locations in the list view have a corresponding "pin" on the map ?
- Does each "pin" have a title and a description ?
- Does the view switch to the map when clicking on a cell in the list ?

- Does the map zoom into the selected location ?  
- When you do this, go to the debug tab in the Xcode navigation menu and check if memory consumption does not increase significantly.  
There may be an increase if the area displayed on the map was not in memory, but if you click several times on the same location, the memory consumption should not change.

✓ Yes

✗ No

## Exercise 06

### Pin Colors

- Is there any "pin" of a different color ?

✓ Yes

✗ No

## Ratings

Don't forget to check the flag corresponding to the defense

★ Outstanding project

■ Empty work

■ Incomplete work

■ Cheat

■ Crash

⊘ Forbidden function

## Conclusion
