SCALE FOR PROJECT SWIFTY COMPANION (/PROJECTS/SWIFTY-COMPANION)

Introduction

To ensure this evaluation goes smoothly, please respect the following set of rules:

- Please remain courteous, polite, respectful and constructive at all times during this exchange. The trust bond between the school's communauty and yourself depends on it.
- Should you notice any malfunctions within the submitted project, make sure you take the time to discuss those with the student (or group of students) being graded.
- Keep in mind that some subjects can be interpreted differently. If you come accross a situation where the student you're grading has interpreted the subject differently than you, try and judge fairly whether their interpretation is acceptable or not, and grade them accordingly. Our peer-evaluation system can only work if you both take it seriously.

Guidelines

- You may only evaluate whatever is in the GiT submission directory of the student you are grading.
- Make sure to check wether the GiT submission directory belongs to the student (or group) you're grading, and that it's the right project.
- Make sure no mischievous aliases have been used to trick you into correcting something that is not actually in the official submitted directory.

- Any script created to make this evaluation session easier whether it was produced by you or the student being graded must be checked rigorously in order to avoid bad surprises.
- If the student who is grading this project hasn't done the project him/herself yet, he/she must read the whole topic before starting the evaluation session.
- Use the flags available to you on this scale in order to report a submission directory that is empty, non-functional, that contains a norm errors or a case of cheating, etc...

 In this case, the evaluation session ends and the final grade is 0 (or -42, in case of cheating). However, unless the student has cheated, we advise you to go through the project together in order for the two (or more) of you to identify the problems that may have led for this project to fail, and avoid repeating those mistakes for future projects.

Preliminaries

Preliminary instructions

First check the following items:

- There is something in the git repository
- No cheating, student must be able to explain the code.
- The project is in swift 2.0+ and run with Xcode 7.0+

If an item in this list is not respected, the notation stops. Use the appropriate flag. You are encouraged to continue the discussion but the scale ends now.

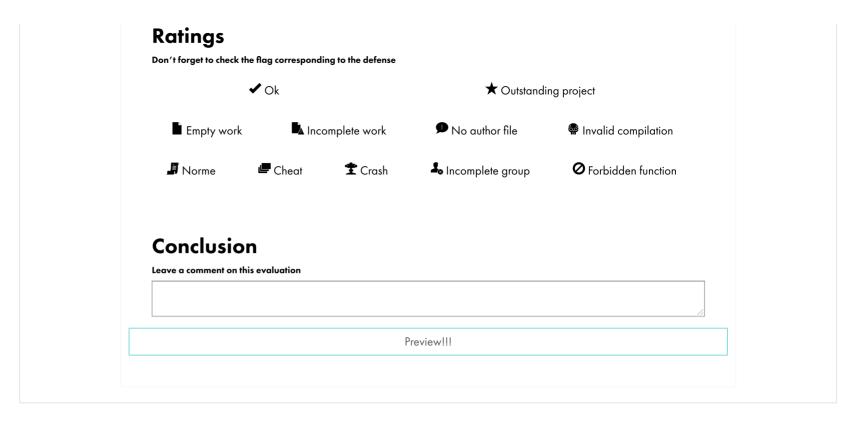

First section

Mandatory part

Compilation

		×N₀	
Views			
	views are present : a view where you search a the dashboard of a user is available.	login,	
		imesNo	
API			
Check that the most r	recent 42 API is used.		
	⊗ Yes	×N₀	
First with a login stud	logins that everything works lent, then with a staff login (like NS or Thor) gin that does not exist (1/3/5 notation). Rate it from 0 (failed)	through 5 (excellent)	
	fil View		
Dashboard -> Pro			
	tails are present. At least four details as well as the picture.		

Dashboard -> Pro	iects	
	ects of the user are present with their he user did not succeed the project.	
	✓ Yes	imesNo
Autolayout		
	ication runs on all versions of iphone available ur i, 5c, 5s, 6, 6plus, 6s, 6s Plus).	der
	⊘ Yes	imesNo
API Token		
- Verify that a token i	s not created for each request.	
	⊗ Yes	×N₀
Bonus Pa	ırt	
Custom Cell		
- Customs Cell were	used to customize tableView.	
	⊗ Yes	imesNo
Bonus		
Other bonuses availa	able ? (other information, is it beautiful, ergonomi	e, etc)
	Rate it from 0 (failed) thr	ough 5 (excellent)
